

BioCover receivers 9 stars on upcoming Agromek exhibition

All exhibitions has their own award system, but it is an exception that a small company like BioCover is able to present 4 new own developed products and to compete for a total of 3 of Agromek 6 awards.

Morten Toft, owner and director of BioCover explains:

“Working with SyreN system has been much like opening Pandora’s Box. With each new innovation, three new opportunities have presented themselves, and it has been a very hard job to keep focus on development and to make sure to finish a project before starting a new one.

Without a doubt, SyreN+ system is the most exciting new product of the four, but each one has a potential to change our business within its area, says Morten Toft. I am looking much forward to Agromek and to discuss the opportunities with existing and new SyreN system customers, Says Morten Toft

CSR nomination for BioCover and SyreN system

The CSR environment prize is developed in cooperation between the CSR-foundation and the Danish ministry for environment.

The Jury has now found the three nominees, that will continue to the CSR ENVIRONMENT prize – and here BioCover A/S participates in a small exclusive company. How will be the final winner will be revealed at the big yearly CSR event – CSR AWARDS 2012, that takes place November 13 and 14th in Sønderborg, Denmark.

It will be the Danish minister for environment that will be on

stage to present the prize.

The CSR ENVIRONMENT prize is delegated to the Danish company, who has developed the best green innovative solution within areas such as water, climate adjustment, resources and waste, noise, chemicals and sustainable solutions within production and consumer goods. The solution should also have an export potential.

See press material from CSR foundation and read more about the prize on <http://csrfonden.dk/>

BioCover and SyreN system receives first ever VERA Verification from Danish environment minister Ida Auken.

SyreN system was recently presented with the first VERA verification from Danish environment minister Auken. A VERA verification gives companies export advantages because they only need to have their technology tested in one country as all participating countries recognise the VERA protocol.

BioCover is already on its way to a full market introduction in Germany and expect the new verification will be helpful in opening doors and bring credibility to the marketing efforts.
